college is full of possibilities.

but how much of it do we actually do?

root cause diagnosis

good ideas rarely happen on their own.

01 / talk vs execution

the project you keep talking about but never start

hackathon ideas and side builds that stall in group chats with 87 messages and zero lines of code.

02 / social isolation

the people you want to meet but never quite find

knowing 50 classmates in large lectures is not the same as having someone on your exact creative wavelength.

03 / accountability vacuum

the study session that keeps getting postponed

promising to study alone in a dorm room, then losing five hours to passive scrolling and fragmented attention.

04 / coordination fatigue

the things you want to try but don't want to do alone

gym workouts, 5km track runs, paper submissions, and side quests that fade without a concrete partner.

the barrier isn't ambition: discovery, compatibility, and follow-through are fragmented across dead group chats, stale dms, and disconnected feeds. [0% output]

find your people.

lockin helps you find things to do, people to do them with, and the momentum to actually get started.

tinder × linkedin — but for college life.

the discovery + intent equation

01 / discovery mechanic

discovery without awkwardness

borrowing tinder's zero-friction mechanism to find people on your wavelength without cold approaches or social anxiety.

02 / shared intent

alignment around ambition

borrowing linkedin's project and skill focus: connecting around building, studying, and shipping rather than superficial profiles.

03 / real-world action

turning discovery into doing

lockin's breakthrough: not another messaging thread, but a shared timer, an in-person check-in, and verified proof of work.

from intention to action.

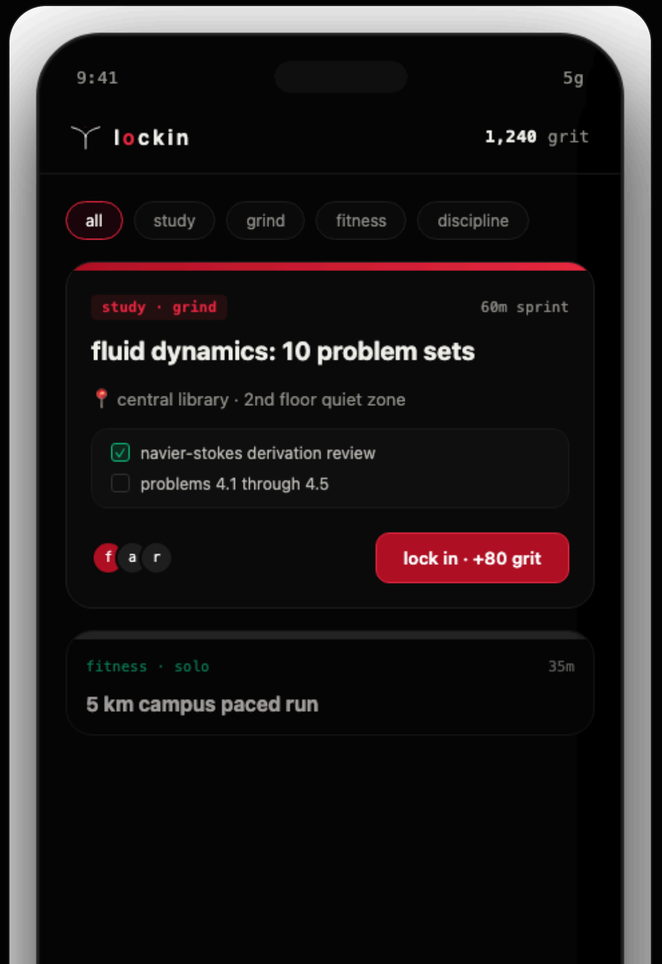

the mission is the atomic unit of the product.

live on lockin.top

step 01

discover

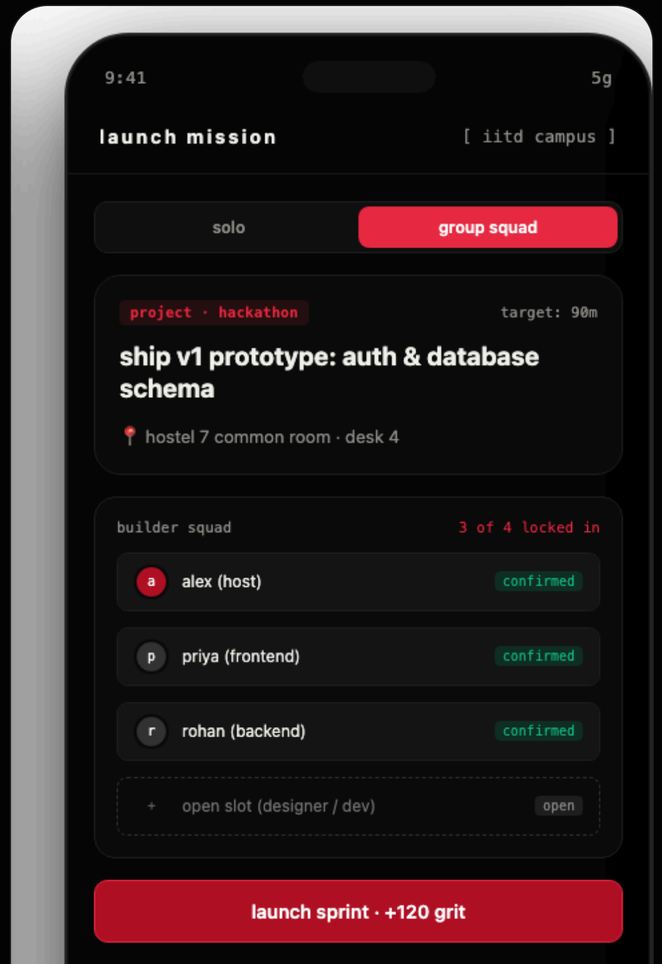

find missions, categories, study tracks, and real opportunities worth showing up for.

step 02

do it solo or together

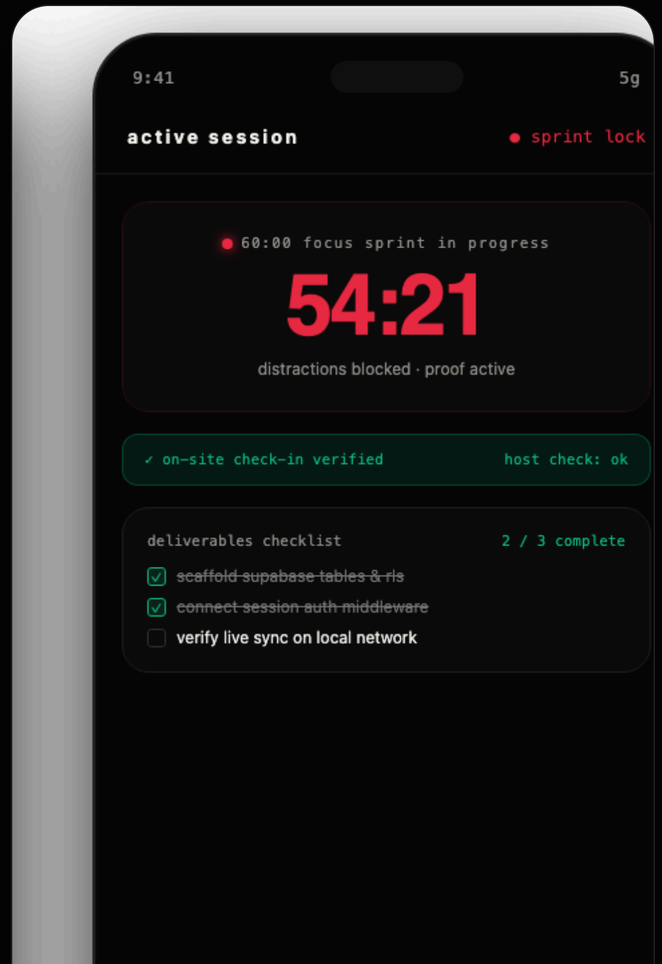

lock in independently for deep focus, or recruit a builder squad with confirmed check-in slots.

step 03

show up

execute with a timed sprint, verify in-person attendance, and stack proof to your grit record.

we’re building more than an app.

we’re building a place where more things happen.

horizon 01 / grind

learning & productivity

study groups, midterm blitzes, structured learning challenges, and academic body-doubling that kills procrastination.

library sessions · code sprints · exam squads

horizon 02 / community

people & community

discovering like-minded peers outside your immediate circle through shared interests, disciplines, and recurring campus rituals.

peer discovery · campus circles · skill matching

horizon 03 / action

missions & experiences

collaborative hackathons, product launches, athletic trials, and new ways to bring students together in the physical world.

hackathons · track runs · campus drops

help us build what comes next.

we’re inviting the builders in this room to launch missions, test prototypes, and shape the campus platform.
